

ABSTRACT

The present invention is a bathroom cabinet for mounting on a wall. The cabinet body has an internal storage area for receiving items to be stored and a cabinet body lip. The cabinet body has a top sidewall, a bottom sidewall, a hinge
5 sidewall and a non-hinge sidewall, the top sidewall connected to the hinge
sidewall by a first corner structural element, the top sidewall connected to the
non-hinge sidewall by a second corner structural element; the bottom sidewall
connected to the hinge sidewall by a third corner structural element, the bottom
sidewall connected to the non-hinge sidewall by a forth corner structural element.
10 A cabinet door is pivotally mounted to the cabinet body. A cabinet seal is
coupled to the cabinet body lip such that the cabinet seal substantially covers the
outer cabinet body lip.
